# *Banks and Your Money:*

# *Ponufers und Inar Segum:*

Money in the Suquellish Tribes is authorized, coined, printed and released under the power of the Muda and specifically the Suquellish Montrasi treasury. Private banks owned by independent bankers, as seen in other nations around the plane is strictly prohibited by Suquellish Constitutional law. Furthermore, every Pon note and Trastel is by law backed by Silver and to a lesser extend, Gold. The Moolli Montrasi may only release in Pon notes and Trastels half the value of the Gold and Silver physically housed in the treasury. This mean's for every $100.00 dollars of gold or Silver actually, physically possessed by the Montrasi, they are only permitted by Law to allow $50.00 dollars in the form of Pon notes and Trastels into the general public circulation. Currently the exchange rate of the US dollar for Suquellish Pon is half, in favor of the Pon notes, which are backed mainly by silver, whereas the US dollar is a fait currency backed by nothing other than the faith it's user's have placed in it and the fact it is the world's reserve currency at present for oil purchases, making it backed by oil. Should the status of the US dollar change, however, it will have no backing at all and be deemed by the Suquellish Montrasi as worthless. As it is, the US dollar is already hyper-inflated by over printing and release. Therefore, the US Dollar on open exchange is worth only about half that of the Suquellish Pon.

Understand, if you are holding dollars and wish to convert them into Pons, for every dollar you convert you will receive 50 Trastels. If you wish to convert your dollars into Pons you will only receive half as much

in Pons, due to the Pon's greater values determined by the spot prices of Silver and to a lesser extent Gold, in the international marketplace of Commerce. Should any nation's currencies fail or become worthless, the Suquellish Republic shall also deem the currency worthless and refuse to accept it or exchange against it. This includes the UK Pound, The German Mark and the US, Australian and Canadian Dollar. There is no exception. Fait currency is of no value and Suquella operates on the Austrian system of economic laws and principles, not the Keynesian system of Credit and Debt for money generation.
